

Not All Foam Products Are Created Equal.

Enovate[®]Pro – A two-component polyurethane foam sealant:

Delivers more product per cylinder set*

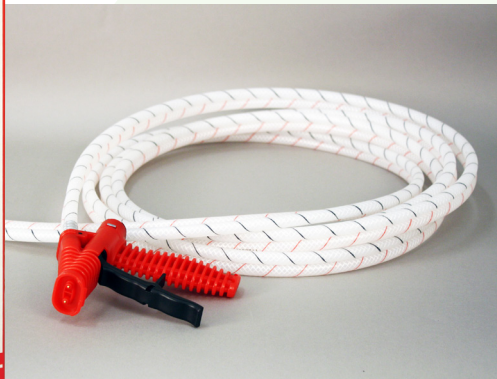

- EnovatePro delivers almost 10 percent more material from each container than comparison products.
- Containers dispense fully with the ability to get multiple uses out of each cylinder set with reusable straws and valves.

24 percent yield improvement than other spray polyurethane foams (SPFs)*

- EnovatePro is specially formulated for higher yield – up to 165 linear feet per ounce applied as a quarter-inch bead, farther than other sealant foams.

Holds its form and shape better than comparison products*

- EnovatePro exhibited the best overall long-term aging properties, holding its form and shape better than comparison products over a wide range of extreme temperatures and humidity conditions used for accelerated aging.
- And, EnovatePro's low-expansion formula minimizes mess and cleanup.

Safety & Handling

For optimum product performance, it's important to adhere to the following best practices:

- **Set-up** – When ordering a 600 board-foot set, remember that these are cylinders only. Make sure that you have a 25-foot Gun Hose Assembly, a set of tank-to-hose valves, and enough nozzles to get through the job.
- **Temperature requirements** – Store cylinders between 70 and 85 degrees. The product must be at this temperature to use. Depending on how hot or cold the product gets in storage, it could take several days for it to reach the appropriate range.
- **Agitation** – Thoroughly agitate both cylinders by shaking and fully inverting several times before use and every hour during use.
- **Health and safety** – Ensure that proper Personal Protective Equipment (PPE) is accessible and worn by all persons who are handling or installing the foam kits. Training is available through the Center for Polyurethane Institute (CPI).

For optimal air sealing and weatherizing, GreenFiber is pleased to offer EnovatePro to contractors as the perfect complement to our natural fiber cellulose insulation.
