

Explore a Better Two-Hour Firewall Solution

INTRODUCING THE PROPRIETARY UL TESTED GREENFIBER U370, SANCTUARY TWO-HOUR FIREWALL, FOR MULTI-FAMILY AND TOWNHOME CONSTRUCTION

It delivers time and money saving performance with:

- Streamlined installation
- Assists in meeting stringent energy efficiency codes (ACH 3 to ACH 5)
- Superior unit-through-unit sound blocking
- Trades work simultaneously, normalizing construction sequence

The SANCTUARY Two-Hour Firewall has undergone rigorous testing by UL to guarantee the safety of your clients. There are local insulation contractors specifically trained in this assembly. In addition, Greenfiber® offers on site training with Greenfiber Trusted Installers (free of charge).

- · Requires Greenfiber® FRM Insulation
- · R-value of 3.7 per inch
- 85% recycled content
- · Reduced weather-related damage
- Shortened construction cycle using efficient techniques
- Exceptional sound reduction between units (STC 56 to 61)
- · Lower ACH / reduced air infiltration
- · Reduces odor transmission between units

The UL-U370 is constructed of two opposing and offset studded walls. Each wall's studs are set to standard 16" o.c. distance. When offset, the actual distance between opposing studs is 8" o.c., creating an 8" cavity into which FRM is spray applied.

U370 FACTS

UL Approved Design Options

- Townhome construction
- Multi-family construction
- Chase design for in-wall mechanical
- OSB wind shear wall design

· Electrical and Penetrations

- UL approved electrical (wiring & boxes)
- Through penetration when in compliance with local building codes

· UL Listed Load Bearing Fire Wall

- U370 2-hour
- U370 3-hour

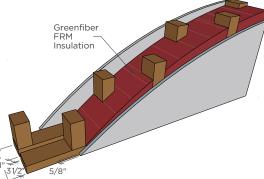

Building Code References

- International Code Council
- UL Evaluation Report 15890-01
- 2018 and 2021 International Residential Code (IRC) Section R317: dwelling unit separation
- 2018 and 2021 International Building Code (IBC) Section 705: fire walls

· Acoustical Ratings

- 2-hour firewall
 STC 56 minimum wall thickness of 9 1/4"
 STC 61 minimum wall thickness of 11 3/4"
- 3-hour firewall
 STC 63 minimum wall thickness of 10 ½"

- · 2x4 double wall 16" on center staggered
- 1" gap between walls.
- FRM100 spray applied at 3.35pcf density
- 5/8 sheet rock Type C or Type ULIX

Compare, head-to-head, the real world project requirements of shaftwall vs. SANCTUARY Two-Hour Firewall.

Why is SANCTUARY
Two-Hour Firewall, U370
the Better Choice vs.
Shaftwall

All units of the building are framed at the same time, under one roof and out of the elements. Installed after all mechanicals are roughed in.

Saves 3" of concrete slab/footer due to smaller footprint (8" vs 11").

Sub-friendly which retains workers and helps productivity.

Shaftwall installation typically takes six to eight man hours of labor per floor.
